## NM ENGINEERING

---

NM Engineering has been providing engineering services to Canadian Babbitt Bearing Ltd., for complex projects requiring detailed and thorough design and engineering capability. Of special note NM Engineering provided engineering design, fabrication and installation services for a custom design machine and a specialized (unique) heavy duty shipping crate.

The services received have been professional, timely and providing excellent product; NM was willing to go the extra mile to accommodate us with excellent ongoing consultation.

We are very happy with the received service.

Yours truly
